

Login and Two-Factor Authentication Troubleshooting

Document ID	TECH-002	Category	Technical
Document Type	Customer Support Knowledge Base	Status	Example / Synthetic

Summary: Troubleshooting for sign-in errors, verification-code problems, and lost authenticator access.

Basic sign-in checks

Verify that you are using the correct email address and that Caps Lock is off.

Try a private or incognito browser window to rule out cached session problems.

If the service page loads incorrectly, clear cookies for the site and retry.

Verification code is not accepted

Authenticator codes are time-based. Confirm that the date and time on your phone are set automatically.

Use the newest six-digit code shown in the authenticator app. A code near the end of its time window may expire before submission.

If you requested an email code, use the latest code received; older codes may be invalidated.

Lost phone or authenticator access

Use one of your saved recovery codes if available.

If no recovery code is available, contact support for identity verification and a two-factor authentication reset. The reset may require additional account verification.

Repeated lockouts

After several unsuccessful sign-in attempts, the account may be temporarily locked for 15 minutes. Wait for the lock period to end before trying again.

Repeated password guessing can extend the lock period. Use password reset instead of continuing to retry an unknown password.

Frequently Asked Questions

Q: Can support disable two-factor authentication immediately?

A: Not without verification. A 2FA reset requires confirming account ownership.

Q: Do recovery codes expire?

A: Unused recovery codes remain valid until they are regenerated or 2FA is reset.
